

Product Requirements Document (PRD) — Smartani

Prepared for automated testing with TestSprite

INTERNAL USE ONLY — contains admin credentials. Do not share publicly / do not submit to lecturer.

1. Product Overview

Smartani is a company-profile website for a precision-farming / smart-greenhouse technology company based in Indonesia. It presents the company's products, articles, features, team, FAQ, and a consultation contact form. It also includes a private **admin panel** (Filament) used by staff to manage all website content.

- **Base URL (production):** `https://kelas-b-5.informatika-unjedir.web.id/`
- **Admin panel URL:** `https://kelas-b-5.informatika-unjedir.web.id/admin`
- **Primary language of UI:** Indonesian (navigation labels are in English).
- **Tech stack:** Laravel 13 (PHP), Filament 5.6 (admin), Tailwind CSS v4, Swiper.js

(sliders), Hotwired Turbo (SPA-like navigation). Server-rendered Blade pages.

1.1 User Roles

Role	Access	Notes
Visitor (public user)	All public pages, no login required	Browses content, submits consultation form
Admin	/admin panel after login	Full CRUD over all content

1.2 Admin Login Credentials (for TestSprite)

Field	Value
Login URL	/admin/login
Email	admin@smartani.id
Password	password123

Any authenticated user can access the admin panel (`canAccessPanel` returns true).

2. Sitemap

Public:

Page	URL	Notes
Home (Beranda)	/	Long single page with multiple sections
Products (Katalog)	/katalog	Paginated grid, category filter

Page	URL	Notes
		via ?category=
Product Detail	/katalog/{id}	404 if id not found
Articles (Artikel)	/artikel	Paginated grid, category filter via ?category=
Article Detail	/artikel/{slug}	404 if slug not found
FAQ	/faq	Accordion list, category filter
Consultation (Konsultasi)	/konsultasi	Contains the contact form

Admin (Filament):

Module	URL	Capability
Login	/admin/login	Email + password auth
Dashboard	/admin	Stats widgets
Hero Slides	/admin/hero-slides	CRUD
Features	/admin/features	CRUD
Sensors	/admin/sensors	CRUD
Products	/admin/products	CRUD
Articles	/admin/articles	CRUD
FAQs	/admin/faqs	CRUD
Contact Messages	/admin/contact-messages	View/manage submitted consultation messages

3. Global UI — Navigation & Footer

Top navigation bar (fixed, on every public page):

- Logo "Smartani" (links to /)
- Menu links: **Home** (/), **Products** (/katalog), **Articles** (/artikel), **FAQ** (/faq)
- A primary button **"Contact Us"** → links to /konsultasi
- On mobile: a hamburger button toggles a dropdown menu with the same links.

Footer (every public page):

- Company info + social icons (Instagram, Facebook, LinkedIn, YouTube, TikTok) — links are placeholders (#).
- "Navigation" column: About Us (/#tentang-kami), Features (/#fitur), Products, Team (/#tim), Articles, FAQ (/#faq).
- "Subscribe to Newsletter" email input + send button — **non-functional by design** (form submit is prevented; no backend). Do not treat lack of submission as a bug.

4. Public Features (detailed)

4.1 Home page (/)

A long scrolling page composed of these sections, in order:

- **Hero slider** — full-width Swiper carousel, auto-plays every 5s with fade effect, clickable pagination dots. Shows admin-managed hero slides (falls back to a default image if none).
- **Features section** (#fitur) — heading "Fitur Terdepan Smartani". A Swiper carousel; each feature shows a title, description, and a **"Tonton Demo"** button. Clicking the button (or the image) opens a **video modal popup**; the modal has a close (X) button and closes when clicking the dark backdrop. (The video is a simulated placeholder.)
- **Sensors section** (#sensor) — heading "Kemampuan Sensor Pintar". Grid of sensor cards (icon, name, description, dummy value + unit). Only shown if at least one active sensor exists.
- **Products section** (#produk) — heading "Produk Unggulan Kami". Shows up to 3 latest products as cards (image, name, description, price label, **"Lihat Detail"** button → /katalog/{id}). A **"Lihat Semua Produk"** button → /katalog.
- **About Us** (#tentang-kami) — company mission text + 3 highlight items + image.
- **Team** (#tim) — heading "Tim Dibalik Smartani". 4 team member cards (CEO, COO, CTO, CMO) with hover effect.
- **Latest Articles** (#artikel) — heading "Wawasan & Edukasi Terbaru". Up to 3 latest articles (image, category badge, date, title, excerpt, **"Baca Selengkapnya"** → /artikel/{slug}). A "Lihat Semua" link → /artikel.
- **FAQ** (#faq) — up to 5 active FAQs of category "Umum", shown as **accordions** (click a question to expand/collapse the answer). A "Lihat Semua FAQ" button → /faq.
- **Consultation CTA** (#kontak) — heading "Konsultasikan Greenhouse Anda" + a **"Mulai Konsultasi"** button → /konsultasi.

Expected behaviors to test on Home:

- Page loads without errors; all sections render.
- Hero slider auto-advances and pagination dots work.
- Feature "Tonton Demo" button opens and closes the video modal.
- FAQ accordion expands/collapses on click.
- All navigation buttons route to the correct page.

4.2 Products / Katalog (/katalog)

- Displays a grid of product cards, **paginated 9 per page** (?page=).
- **Category filter**: selecting a category reloads with ?category=<name>; only products of that category are shown. "Semua" shows all.
- Each card has a **"Lihat Detail"** link → /katalog/{id}.
- **Pagination** preserves the active category filter (withQueryString).

4.3 Product Detail (/katalog/{id})

- Shows full product info (name, image, description, content/specs, price).
- **Invalid id** (e.g. /katalog/999999) → returns HTTP 404 (Not Found page).

4.4 Articles / Artikel (/artikel)

- Grid of article cards, **paginated 9 per page**, ordered by newest published_at.
- **Category filter** via ?category= (e.g. "Edukasi", "Tips & Trik", "Teknologi"). "Semua" shows all.
- Each card → /artikel/{slug}.

4.5 Article Detail (/artikel/{slug})

- Shows the article (title, image, category, date, full HTML content).
- Shows up to **2 related articles** at the bottom.

- **Invalid slug** (e.g. `/artikel/tidak-ada`) → HTTP 404.

4.6 FAQ (`/faq`)

- Lists all **active** FAQs as accordions (click to expand/collapse).
- **Category filter** by FAQ category (e.g. "Umum", "Produk", "Artikel").

4.7 Consultation form (`/konsultasi`) — KEY FLOW

Left side shows contact info (Email `info.smartani@gmail.com`, Phone `+62 851 1755 1850`, Address "Purwokerto, Indonesia"). Right side is the **consultation form** (POST to `/contact`).

Form fields:

Label (UI)	name	Required	Rule
Nama Depan	<code>first_name</code>	Yes	string, max 50
Nama Belakang	<code>last_name</code>	Yes	string, max 50
Email	<code>email</code>	Yes	valid email, max 100
Nama Green House	<code>greenhouse_name</code>	No	string, max 255
Lokasi Green House	<code>greenhouse_location</code>	No	string, max 255
Subjek	<code>subject</code>	Yes	string, max 100
Konsultasi	<code>message</code>	Yes	string (textarea)

Submit button label: "**Kirim Pesan**".

Submission behavior (AJAX):

- On submit, the form sends an AJAX POST. While sending, the button shows "Mengirim...".
- **On success** (valid data): server returns JSON `{success:true, message:"Pesan Anda berhasil dikirim! ..."}.` The button turns green and shows "**Terkirim!**", then the form is reset (cleared). The message is saved and appears in the admin "Contact Messages" module.
- **On failure** (validation error, e.g. empty required field or invalid email): the button shows "**Gagal Dikirim**". Required HTML fields also trigger native browser validation.

Expected tests:

- Submit with all required valid fields → success state "Terkirim!".
- Submit with a required field empty → blocked / "Gagal Dikirim".
- Submit with invalid email format (e.g. `abc@`) → rejected.
- Optional greenhouse fields left empty → still succeeds.

5. Admin Panel Features (Filament, `/admin`)

Requires login first. Use credentials in section 1.2.

5.1 Login (`/admin/login`)

- Email + password form.

- **Valid credentials** → redirected to the admin dashboard.
- **Invalid credentials** → error message, stays on login page.

5.2 Dashboard (/admin)

- Shows account widget + info widget + dashboard statistics (counts of content).

5.3 Content modules (each is a standard CRUD resource)

For every module below, an admin can: **List** records (table with search/sort/pagination),

Create a new record, **Edit** an existing record, and **Delete** records.

Module	Manages	Key fields
Hero Slides	Homepage hero carousel images	image, title, order, is_active
Features	Homepage feature cards	title, description, image, order_index, is_active
Sensors	Sensor cards on home	name, icon, value_dummy, unit, description, is_active
Products	Product catalog	name, price, price_label, description, content, category, image
Articles	Blog/articles	title, slug, content, category, thumbnail, published_at
FAQs	FAQ entries	question, answer, category, is_active
Contact Messages	Submissions from /konsultasi form (read/manage)	first_name, last_name, email, greenhouse_name, greenhouse_location, subject, message

Expected admin tests (high value):

- Login with correct credentials succeeds; with wrong password fails.
- Dashboard loads after login.
- Each module's **List** page loads and shows data in a table.
- **Create** a record (e.g. a new FAQ or Product) → it saves and appears in the list.
- **Edit** a record → changes persist.
- **Delete** a record → it is removed from the list.
- A consultation submitted on the public /konsultasi form appears under **Contact Messages**.
- Accessing /admin while logged out redirects to /admin/login.

6. Test Scope & Priorities

In scope

- **Public site:** navigation, home sections, katalog (list/filter/pagination/detail/404), artikel (list/filter/pagination/detail/404), FAQ (list/filter/accordion), consultation form (valid/invalid/optional), responsive layout, 404 handling.
- **Admin panel:** login (valid/invalid), dashboard, and CRUD for each module, plus the end-to-end link (public form submission → appears in Contact Messages).

Priorities

- **P0 (critical):** Home loads, navigation works, consultation form valid submission, admin login, admin module list pages load.
- **P1 (high):** Category filters, pagination, product/article detail, 404 pages, admin create/edit/delete on at least Products, Articles, FAQs.
- **P2 (medium):** Hero/feature carousels, FAQ accordion, video modal, responsive view, admin Hero Slides / Sensors / Features CRUD.

Out of scope (not bugs)

- Footer **newsletter** form (intentionally non-functional).
- Footer **social media** icons and Privacy/Terms links (placeholder #).
- The feature **video modal** plays a simulated placeholder, not a real video.
- Any feature requiring real payment, real IoT device data, or external integrations.

7. Notes for the Tester (TestSprite)

- The site uses Hotwired Turbo, so navigation may feel SPA-like; wait for content to load after clicking links.
- Success/error feedback on the consultation form is shown by changing the submit button text ("Mengirim..." → "Ter kirim!" / "Gagal Dikirim"), not a separate alert box.
- Sliders auto-rotate; assert on presence/structure rather than a fixed slide.
- Admin tables, forms, and buttons are rendered by Filament (Livewire); allow for asynchronous updates after actions like save/delete.
